SUN TRANSISTOR REGULATOR TESTER

MODEL TRT-12

PRICE **\$94⁰⁰** includes all accessories

The Sun Transistor Regulator Tester will quickly and accurately check all 6 and 12 volt transistor regulators for conditions and voltage setting. No special training required to accurately diagnose a regulator malfunction or incorrect voltage setting. The transistor regulator can be tested on the vehicle or on the bench. No connections are made to the rest of the charging system. Can be used to change voltage setting on adjustable transistor regulators. All you have to do is select the proper adapter, connect it to the regulator, push the SET button and perform the easy test. Five adapters, to match the various transistor regulators, are furnished to allow error free connections to the regulator.

The unit is contained in a 10" x 8" x 4" formed steel case with a hinged cover. The unit is equipped with a highly accurate, easy to read 4" meter featuring a 0 to 20 volt scale. It is powered by 115 V 60 cycle AC and equipped with a 6 foot power cord.

The following accessories are included:

- Universal Adapter #6005-028
- Motorola (Chrysler) Adapter #6005-031
- Motorola Adapter #6005-033
- Delco-Remy Adapter #6005-040
- Motorola (Willys) Adapter #6005-041
